

RX600

Apron for Frontal Protection

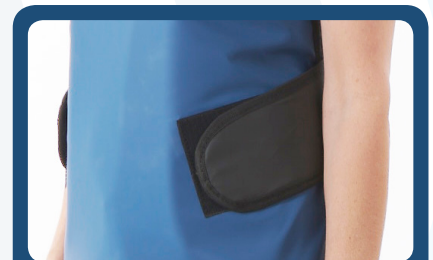

RX600

Its advanced features make this model the favorite apron for front protection among our customers:

- **Overlapping back panels provide additional X-ray protection**
- **Easy to put on and take off with closures in the front area**
- **The broad stretch inserts ensure a good fit and shoulder comfort**

The entire area of the back panels contain a protective inlay material, providing an advantage in protection to conventional models and guaranteeing what is covered is protected.

Produced with priority patented LEAD-FREE protective material, the apron meets the ASTM Standard for occupational health safety requirements while providing a comfortable solution for extended wearing periods in radiological environments.

Fastening System

Radionex uses only the highest quality class of hook & loop fastening systems.

The large fastening surface area provides for a longer product life.

Material / Lead Equivalent Value

X-ray protective material: **Front** protection in Pb 0.35 mm or Pb 0.50 mm.
Back protection in Pb 0.25 mm.
